

8/12

Wet Chemistry Method

Starting substances

Production of a
sprayable suspension

Grinding &
mixing

e.g. Tumbling mixer,
drum grinder, attritor
Solvent = water, alcohol

Granulating
the powder

Separating
the
suspension

Spray
granulation

Spray drier

Production of sprayed
powders for thermospraying

Calcination of the
spray granulate

Temperatures
1000-1700°C, air

Application

Fig. 9
